  - preferably similar typed tasks goes to 1 person
  - and overall difficulty is about averaged out for everyone
- We will decide as a team during sprints on who does what task

## 8. Submitting Assignments

- We will be creating branches to work on the different components and commit our changes regularly
- We will make sure to merge all the required branches to the master branch before the deadline.
- We will code review any commits from peers.
- All team members will make sure that all the required files and components are in the repository the day before the deadline.

## 9. Contingency Planning

- A team member should inform the other members of the team as soon as you intend on dropping the course.
- Let the professor know if someone constantly misses meetings without a valid reason and/or doesn't reply on group chats
